

Andrei Karalevich

Los Angeles, CA, 90045 | korolevichandrej@gmail.com | +1(253) 212-8501 | [LinkedIn URL](#)

Software Engineer with 5 years of experience building scalable and high-performance frontend applications and JavaScript/TypeScript, specializing in modern frameworks like React, Vue, and backend technologies like Node.js and Python.

Professional Experience

Sr. Software Engineer

SearchStax, El Segundo, CA.

From November 2023 to Present

- Prototype and built an internal library of 40+ reusable components, accelerating development and ensuring UI consistency across the application.
- Led the refactoring and migration of a legacy codebase, identifying and resolving performance bottlenecks. Modernized architecture and implemented optimizations that significantly improved critical performance metrics, including First Contentful Paint, Largest Contentful Paint, First Input Delay, and Cumulative Layout Shift, resulting in faster initial page loads and a smoother user experience.
- Developed and maintained core npm UI libraries: searchstudio-ux-js, searchstudio-ux-react, searchstudio-ux-vue, searchstudio-ux-nextjs enabling seamless integration of SearchStax Site Search across applications.

Frontend Software Engineer

Nexon America, Los Angeles, CA.

From July 2022 to March 2023

- Redesigned and rebranded the company's affiliate website, 'Nexon Game Card', implementing a fully responsive and mobile-optimized design. The improved UX led to a measurable increase in gift card sales and revenue.
- Redesigned and optimized the internal tool for managing and testing user data by leveraging Redux Toolkit (RTK) and RTK Query. Streamlined data fetching and state management, which improved developer efficiency, reduced unnecessary network traffic, and significantly lowered server resource usage and operational costs.
- Developed a microsite for a seasonal company event that resulted in an additional 70,000 users within a month

Jr. Frontend Software Engineer

Wargaming, Saint Petersburg, Russia.

From May 2021 to June 2022

- Developed and implemented UI components that enabled players to track ship construction progress within the game client. The work was done as part of a seasonal event with high user interest and generated close to 20% of World of Warships' annual income.
- Optimized an application by updating the codebase, implementing TypeScript, and improving test coverage to 90%, and added lazy loading of the bundle. This reduced the web page loading time by 4 seconds and increased the speed of implementation of the new functionality and the application's stability.

Jr. Frontend Software Engineer

LeverX Group, Minsk, Belarus.

From August 2020 to May 2021

- Improved application scalability and maintainability by migrating from Redux Thunk to Redux Saga for more robust side-effect management. This architectural upgrade facilitated the implementation of new features and contributed to increased business revenue.

Engineer

Belarusian Nuclear Power Plant, Belarus. *From July 2016 to July 2020*

- Operated and maintained turbine equipment in a high-stakes industrial environment, ensuring continuous and safe

power generation.

- Collaborated with cross-functional teams, including engineers and technical specialists, to optimize system performance.

Education

Belarusian National Technical University.

From September 2011 to July 2016

Specialist Degree in Energy Engineering (equivalent to a Master's, Specialization: Nuclear Power Plants)

Additional Skills

Redux, Redux-Saga, D3, Redux-Thunk, RTK, RTK Query, Axios, Cypress, React-Test-Library, GIT, GitHub, GitLab, GitHub Actions, Jenkins, Docker, NextJs, Jest, Tailwind CSS, Material UI, Bootstrap, Figma, Webpack, Vite, Service Worker, Web Worker, SCSS, NPM, ESLint, Storybook, Express.js, MongoDB, Mongoose, GraphQL, RxJS, WebSocket, Handlebars, Progressive Web Apps, Computer science, Design Patterns, Test Driven Development, Object Orient Development, OOP, MVC, MVVM, Agile.
